

ASP.NET

❖ What is ASP.NET?

ASP.NET(Active Server Pages.NET) is a web application framework developed by Microsoft for building:

- Websites
- Web Applications
- Web APIs
- Enterprise Applications
- Dynamic Webpages

It is built on top of the .NET framework

❖ What is ASP.NET Core?

ASP.NET Core is the modern, cross-platform version of ASP.NET.

It is used to build:

- Websites
- REST APIs
- Cloud Applications
- Microservices
- Real-Time Applications

It mostly runs on:

- Windows
- Linux
- MacOS

❖ Why is ASP.NET Used?

ASP.NET is used for College Management System

Features:

- Student Login
- Faculty Login
- Attendance
- Results

All these require:

- Database access
- Authentication
- Business logic
- Security

ASP.NET provides all these features.

❖ Where is ASP.NET Used?

1. E-Commerce Websites

EX:

- Shopping Websites
- Online Stores

Features:

- Product Management
- Payments
- Orders

2. Banking Applications:

Features:

- Login
- Transactions
- Security

3. Employee Management Systems:

Features:

- Employee CRUD
- Authentication
- Reports

4. Hospital Management Systems:

Features:

- Patient Records
- Billing
- Appointments

5. College Management Systems

Features:

- Students
- Faculty
- Attendance
- Results

6. REST APIs:

Ex:

Mobile App

ASP.NET Core API

Database

7. Micro Services:

Large Companies Split applications into multiple services.

- User Service
- Order Service
- Payment Service
- Notification Service

Each Service can be built using ASP.NET Core Web API.
